```java
import java.rmi.*;
import java.util.*;

public class RmiClient{

    public static void main(String[] args)throws Throwable{
        int x, result;
        Scanner s = new Scanner(System.in);
        Square skeleton =
(Square)Naming.lookup("rmi://localhost:4500/square");
        x = s.nextInt();
        result = skeleton.getSquare(x);
        System.out.println("Square of "+x+" is "+result);

    }
}
```
